Canadian Income Survey, 2017 (CIS 2017)

Enquête canadienne sur le revenu, 2017

Overview	
Type	Canadian Income Survey
Identification	CIS-72M0003-E-2017
Series	The Canadian Income Survey (CIS) is a cross-sectional survey developed to provide a portrait of the income and income sources of Canadians, with their individual and household characteristics.
<p>Abstract</p> <p>Income data has been used extensively by researchers to better understand the economic well-being of Canadians. To meet the needs of these users, Statistics Canada has produced numerous cross-sectional public use microdata files (PUMFs). PUMFs for the Survey of Consumer Finance (SCF) were released until reference year 1997. With the end of the SCF, PUMFs for the Survey of Labour and Income Dynamics (SLID) were produced for reference years 1996 to 2011. The Canadian Income Survey (CIS) was introduced for the 2012 reference year. The CIS is a cross-sectional survey developed to provide information on the income and income sources of Canadians, with their individual and household characteristics. It is a short questionnaire which is asked of a sub-sample of respondents to the Labour Force Survey (LFS), gathering information on labour market activity, school attendance, support payments, child care expenses, inter-household transfers, personal income, and characteristics and costs of housing. The CIS content is supplemented with information from the LFS on individual and household characteristics (e.g. age, educational attainment, main job characteristics, and family type) and with tax data for income and income sources (Statistics Canada, 2017). The CIS PUMF is an anonymized microdata file that contains only a subset of variables that are available on the CIS master file. Various techniques have been employed to protect CIS respondents against the risk of disclosure.</p>	
Kind of Data	Survey data
Unit of Analysis	Individual

Scope & Coverage	
Keywords	Employment income, Family and household income, Government transfers, Income, Low income, Major income earner, Market income, Non-discretionary expenses, Pension, Support payments, Unemployment income
Topics	Household, Income
Time Period(s)	2018
Countries	Canada
<p>Geographic Coverage</p> <p>Canada Provinces</p>	
<p>Universe</p> <p>The target population of CIS is all individuals in Canada, excluding residents of the Yukon, the Northwest Territories and Nunavut, residents of institutions, persons living on reserves and other Aboriginal settlements in the provinces, and members of the Canadian Forces living in military camps. Overall, these exclusions amount to less than 3 percent of the population.</p>

Sampling

Sampling Procedure

The Canadian Income Survey is administered to a sub-sample of LFS respondents. The LFS sample is drawn from an area frame and is based on a stratified, multi-stage design that uses probability sampling. The LFS total sample is composed of six independent samples, called rotation groups, because each month one sixth of the sample (or one rotation group) is replaced. For 2017, the CIS sample size was increased by about 50%. The 2017 CIS used six rotation groups from the LFS (instead of four), i.e. the rotation group answering the LFS for the last time in January, February, March, April, May and June of 2018. The sample size is approximately 9,000 households per rotation group.

Response Rate

In 2017, the CIS final response rate was 78.0%.

Weighting

The CIS sample is a sub-sample of the Labour Force Survey sample. LFS uses a complex random sampling plan to select the households. Each household in the sample represents a number of other households in the population. Estimates for a given characteristic are obtained by multiplying the survey weight by the corresponding value of this characteristic. The key step in the point estimation process is therefore the derivation of the weight.

The initial weights are the LFS sub-weights, which are then adjusted to account for the fact that the CIS is a sub-sample of the LFS sample.

Two types of adjustment are then applied to these weights in order to improve the reliability of the estimates. The weights are first inflated to compensate for CIS non-response. The non-response adjusted weights are then adjusted to ensure that estimates on relevant population characteristics respect population totals from sources other than the survey.

The first set of population totals used by the CIS are estimates provided by Statistics Canada's Demography Division of population counts based on the 2011 Census of Population. For each province, population counts by age/sex groups, household size and economic family size are used. CIS also employs population counts for six Census Metropolitan Areas (Montreal, Toronto, Winnipeg, Calgary, Edmonton, and Vancouver).

The second set of totals is derived from the T4 file from the Canada Revenue Agency (CRA) and is intended to ensure that the weighted distribution of income (based on wages and salaries) in the data set matches that of the Canadian population.

The CIS survey weights are then modified for the PUMF so that valid inferences to the CIS population can be made.

It is the responsibility of data users to apply the weights for any estimates they wish to produce. If weights are not used, the results derived from the microdata cannot be considered to be representative of the survey population. On the CIS PUMF file, the weight variable is named FWEIGHT.

Data Collection

Data Collection Dates	start 2018-01-01 end 2018-06-01
Time Period(s)	start 2017-01-01 end 2017-12-31
Data Collection Mode	CIS interviews are conducted by telephone by interviewers working in Statistics Canada's regional offices or by personal visit from a field interviewer. In addition, respondents who meet certain criteria are offered the option of completing the survey on-line.

Questionnaires

The questionnaire follows standard practices and wording used in a computer-assisted interviewing environment, such as the automatic control of flows that depend upon answers to earlier questions and the use of edits to check for logical inconsistencies and capture errors.

Data Processing & Appraisal

Estimates of Sampling Error

Non-sampling errors resulting from human errors such as simple mistakes, misunderstanding or misinterpretation will generally have a minor impact on the overall accuracy of the estimates. Errors occurring systematically and errors arising

from sources such as coverage, erroneous response, non-response and processing can have, on the other hand, a major impact on the reliability of estimates. Considerable time and effort is invested into reducing non-sampling errors in CIS.

Coverage error arises when sampling frame units do not exactly represent the target population. Units may have been omitted from the sampling frame (undercoverage), or units not in the target population may have been included (overcoverage), or units may have been included more than once (duplicates). Undercoverage represents the most common coverage problem. Slippage is a measure of survey coverage error. It is defined as the percentage difference between control totals (postcensal population estimates) and weighted sample counts. In 2016, the CIS person-level slippage rate was 9.9%.

Variables Description

Dataset contains 194 variable(s)

File : CIS-72M0003-E-2017

YEAR: Reference year

Information	[Type= continuous] [Format=numeric] [Range= 2016-2016] [Missing=*]
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0] [Mean=2017 / 2017] [StdDev=0 / 0.00011]
Universe	All persons
Literal question	Reference year.

PUMFID: Household identifier

Information	[Type= continuous] [Format=numeric] [Range= 2129-28803] [Missing=*]
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0] [Mean=22031.356 / 22201.225] [StdDev=11495.029 / 11492.903]
Universe	All persons
Literal question	Household identifier.

PERSONID: Person identifier

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0]
Universe	All persons
Literal question	Person identifier.

FWEIGHT: Final weight

Information	[Type= continuous] [Format=numeric] [Range= 10.4077-7801.1663] [Missing=*]
Statistics [NW/ W]	[Valid=92292 /-] [Invalid=0 /-] [Mean=388.45 /-] [StdDev=443.419 /-]
Universe	All persons
Literal question	Final weight.

PROV: Province

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0]
Universe	All persons
Literal question	Province.

Value	Label	Cases	Weighted	Percentage (Weighted)
10	Newfoundland and Labrador	3461	517889.0	1.4%

SCSUM: Yearly summary of time worked during the refyear

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0]
Universe	Persons aged 16 and over

File : CIS-72M0003-E-2017

SCSUM: Yearly summary of time worked during the refyear

Literal question	Yearly summary of time worked during the reference year.
Notes	The "full-year" or "part-year" portion is based on the number of weeks employed during the year (52 weeks corresponds to "full-year" while between 1 and 51 weeks corresponds to "part-year"). The "full-time" or "part-time" portion is based on the average usual hours worked at all jobs during the year (30 hours or more corresponds to "fulltime" while less than 30 corresponds to "part-time").

Value	Label	Cases	Weighted	Percentage (Weighted)
11	Full-year full-time worker	30366	12044882.5	33.6%
12	Full-year part-time worker	4669	1971326.2	5.5%
21	Part-year full-time worker	10372	4000439.9	11.2%
22	Part-year part-time worker	4611	1975955.0	5.5%
30	Did not work during the year	25354	9774723.0	27.3%
96	Valid skip	16920	6083472.4	17.0%
97	Don't know	0	0.0	
98	Refusal	0	0.0	
99	Not stated	0	0.0	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

ALFST: Annual labour force status

Information	[Type= discrete] [Format=character] [Missing=*]
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0]
Universe	All persons aged 16 to 69 and persons aged 70 and over who worked during the reference year
Literal question	Annual labour force status.

Value	Label	Cases	Weighted	Percentage (Weighted)
01	Employed all year	35035	14016208.7	39.1%
02	Unemployed all year	1784	813635.1	2.3%
03	Not in the labour force all year	12488	5006528.8	14.0%
04	Employed part-year, unemployed part-year	4176	1603329.5	4.5%
05	Employed part-year, not in labour force part-year	8041	3153535.7	8.8%
06	Unemployed part-year, not in labour force part-year	563	268344.3	0.7%
07	Employed, unemployed and not in labour force during year	2766	1219529.7	3.4%

# OASGI: Total of Old Age Security benefits				
Information	[Type= continuous] [Format=numeric] [Range= 0-26250] [Missing=*]			
Statistics [NW/ W]	[Valid=75372 / 29767326.603] [Invalid=16920 / 6083472.398] [Mean=1792.274 / 1556.029] [StdDev=3639.03 / 3519.317]			
Universe	Persons aged 16 and over			
Literal question	Total of Old Age Security benefits.			
Notes	Total of Old Age Security benefits, i.e., the Old Age Security pension plus the Guaranteed Income Supplement. The federal Old Age Security (OAS) system includes a monthly pension plus an income supplement. The OAS pension is paid to Canadian residents aged 65 and over. In recent years, the pension may be partially or entirely withheld at source or clawed back through the tax system if family net income exceeds a certain level. OAS pensioners whose family net income falls under a certain level may also receive the Guaranteed Income Supplement (GIS). The supplement includes an allowance for spouses aged 60 to 64 of OAS pensioners.

# EFOASGI: EF - Total of Old Age Security benefits			
Information	[Type= continuous] [Format=numeric] [Range= 0-42100] [Missing=*]		
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0] [Mean=2732.001 / 2620.782] [StdDev=5561.801 / 5598.626]		
Universe	All persons		
Literal question	EF - Total of Old Age Security benefits.		
Notes	Total of Old Age Security benefits, i.e., the Old Age Security pension plus the Guaranteed Income Supplement. The federal Old Age Security (OAS) system includes a monthly pension plus an income supplement. The OAS pension is paid to Canadian residents aged 65 and over. In recent years, the pension may be partially or entirely withheld at source or clawed back through the tax system if family net income exceeds a certain level. OAS pensioners whose family net income falls under a certain level may also receive the Guaranteed Income Supplement (GIS). The supplement includes an allowance for spouses aged 60 to 64 of OAS pensioners

# EFPRPEN: EF - Private retirement pensions			
Information	[Type= continuous] [Format=numeric] [Range= 0-185000] [Missing=*]		
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0] [Mean=6635.49 / 6161.669] [StdDev=17693.628 / 17957.032]		
Universe	All persons		
Literal question	EF - Private retirement pensions.		
Notes	Retirement pensions from all private sources, primarily employer pension plans. Amounts may be received in various forms such as annuities, superannuation or RRIFs (Registered Retirement Income Funds). Income withdrawn from RRSPs before the age of 65 is treated as RRSP withdrawals (not included in retirement pensions), and income withdrawn from RRSPs at ages 65 or older is treated as retirement pensions.

Universe	All persons		

# CFOASGI: CF - Total of Old Age Security benefits			
Literal question		CF - Total of Old Age Security benefits.	
Notes		Total of Old Age Security benefits, i.e., the Old Age Security pension plus the Guaranteed Income Supplement. The federal Old Age Security (OAS) system includes a monthly pension plus an income supplement. The OAS pension is paid to Canadian residents aged 65 and over. In recent years, the pension may be partially or entirely withheld at source or clawed back through the tax system if family net income exceeds a certain level. OAS pensioners whose family net income falls under a certain level may also receive the Guaranteed Income Supplement (GIS). The supplement includes an allowance for spouses aged 60 to 64 of OAS pensioners. Census family variables are based on the Census definition of a census family.

<i>Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.</i>			
# CFPRPEN: CF - Private retirement pensions			
Information	[Type= continuous] [Format=numeric] [Range= 0-185000] [Missing=*]		
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0] [Mean=6350.523 / 5760.648] [StdDev=17398.613 / 17514.062]		
Universe	All persons		
Literal question	CF - Private retirement pensions.		
Notes	Retirement pensions from all private sources, primarily employer pension plans. Amounts may be received in various forms such as annuities, superannuation or RRIFs (Registered Retirement Income Funds). Income withdrawn from RRSPs before the age of 65 is treated as RRSP withdrawals (not included in retirement pensions), and income withdrawn from RRSPs at ages 65 or older is treated as retirement pensions. Census family variables are based on the Census definition of a census family.

# SUIT: Flag - Dwelling suitable, according to Nat. Occ. Standard				
Information	[Type= discrete] [Format=character] [Missing=*]			
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0]			
Universe	All persons			
Literal question	Flag - Dwelling suitable, according to National Occupational Standard.			
Notes	Housing suitability refers to whether a private household is living in suitable accommodations according to the National Occupancy Standard (NOS); that is, whether the dwelling has enough bedrooms for the size and composition of the household. A household is deemed to be living in suitable accommodations if its dwelling has enough bedrooms, as calculated using the NOS.

# CHNEED: Core housing need indicator				
Information	[Type= discrete] [Format=character] [Missing=*]			
Statistics [NW/ W]	[Valid=92292 / 35850799.001] [Invalid=0 / 0]			

# CHNEED: Core housing need indicator				
Universe	All persons in non-farm households that live in a census metropolitan area (CMA) or census agglomeration (CA) with incomes greater than zero and shelter-cost-to-income ratios less than 100%.			
Literal question	Core housing need indicator			
Notes	A household in core housing need is one whose dwelling is considered unsuitable, inadequate or unaffordable and whose income levels are such that they could not afford alternative suitable and adequate housing in their community. Housing standards are defined as follows: a) adequate housing is reported by their residents as not requiring any major repairs; b) affordable housing has shelter costs equal to less than 30% of total before-tax household income; c) suitable housing has enough bedrooms for the size and composition of resident households according to the National Occupancy Standard (NOS) requirements. Note that households where the major income earner is a person not in an economic family aged 16 to 29 who attended school during the year are considered not to be in core housing need regardless of their housing circumstances. Attending school is considered a transitional phase, and low incomes earned by student households are viewed as being a temporary condition.
